Subject: Additional comment to Proposed Cleanup steps at Olin

Dear Ms. Morash,

I believe that the EPA should implement the extended NDMA testing suggestions from the scientists directly involved in the research on the Olin site. Currently there has been no NDMA precursor research done, therefore, it is important to characterize the DAPL so we can learn what NDMA precursors are present. We need to understand how much this plays a role in total NDMA exposure in order to make more informed predictions on how much is being formed and where it is going. The people of Wilmington are highly concerned by this unknown and it is our duty as scientists to address these concerns.
